- Available in Gunmetal or White
- 3 year warranty

# CRANK OPENING AND CLOSING SYSTEM

## SPECS

- Patented Design Crank handle for opening and closing the Louvre Roofed Gazebo's.
- Components are made of some Stainless Steel and some Galvanized Steel.
- Easy Opening and Closing.
- Crank handle is located on one the legs.
- Much better looking than most others with their handle hanging from the beam above.

- 
- These Louvred Roofed Gazebo's are not a permanent structure.
  - They are designed to be waterproof when louvres are closed. Rainwater runs off the Louvres into the gutters and down through the legs. However, during heavy or torrential rain, some rainwater may drip through.
  - Keep Louvres open in high winds or stormy conditions to allow the wind to pass through, reducing stress on the Gazebo.
  - If Anti Wind Screens are attached, please slide up and stow in high wind or stormy conditions.
  - Ideally stow the Anti Wind Screens when dry. If situation does not allow this at the closest time after these have been stowed, slide down to allow to dry properly. This will help preserve the performance and colour of the screen.
  - Not for Commercial Use.
